Three Things.

Three things to love-courage, gen tleness and affection.

Three things to hate-cruelty, ar rogance and affectation.

Three th ngs to delight in-frank ness, freedom and beauty.

Three things to avoid-idleness loquacity and flippant jesting.

Three things to fight for-honor. home and country.

Three things to admire-power dignity and gracefulness.

Three things to think about-life, death and eternity.

Plays and Players,

Henrik Ibseu is again reported to be critically ill at his home in Christian.

Our ave age fellow citizen is a sane. healthy man, who believes in decency and has a wholesome mind.

A healthy repbulican government wust rest upon individuals, not upor classes or sections.

It is said that Macaulays memory was so retentive that, after reading a book once, he could give all the long passages of it verbatim.

A card press in the government p inting office, Washington, prints 60,000 cards on both sides in one hour. They are printed and cut from a web of bristol board.

CUES' FOOD.

They Thrive on Grape-Nuts.

Healthy babies don't cry and the wel nourished baby that is fed on Grape-Nuts is never a crying baby, Many get well.

"My little baby was given up by three doctors who said that the condense milk on which I had fed it had ruine the child's stomach. One of the doctor told me that the only thing to do would be to try Grape-Nuts, so I got som 132 tablespoonfuls in one pint of cold water for half an hour, then I strained off the liquid and mixed 12 teaspoonful of this strained Grape-Nuts juice with six teaspoonfuls of rich milk, put in s pinch of salt and a little sugar, warmed it and gave it to baby every two hours.

"In this simple, easy way I saved baby's life and have built her up to a strong, healthy child, rosy and laughing. The food must certainly be perfect to have such a wonderful effect as this. can truthfully say I think it is the best food in the world to raise delicate babies our family." Co., Battle Creek, Mich.

strong, healthy man or woman. Grape Nuts food stands for the true theory of health.

Look in each package for a copy of Wellville.

Science

Certain spiders sail in airships made that travels in balloons has been refirst interviewed that if I long and composed of tiny bubbles, having been observed, it was found fly, supposed to be food. As the males also attract females by the balloons,

Easily fusible alloys for casts of leaves, fruits, insects, etc., must contain cadmium, according to a German authority, to preserve the articles from backache. I have never had a pain or injury. Such an alloy is Wood's metal, which consists of two parts of tin, four of lead, seven to eight of bismuth, and one to two of cadmium, and which fuses between 66 and 72 degrees C. Lipowitz's metal, which softens at 55 degrees C., and becomes perfectly liquid at 66 degrees, consists of four parts of tin, eight parts of lead, fifteen of bismuth and three of cad-

Dr. W. W. Keen, in his presidential address before the Congress of American Physicians and Surgeons in Washington on May 12th, remarked upon "the immense advantages of a good hospital over the most luxurious A man may be the architect of his homes" for the care of the sick. The poorest patient in a hospital, he said, is better cared for, and his case is more carefully investigated by bacteriological, chemical and clinical methods, than are the well-to-do in their own hospitals, where the many and comgical emergency are provided.

Experiments recently made on Erie railroad ferryboats between New York and Jersey City have shown t'e practicability of transmitting speech by wireless telephone from one moving with aerial antennae carried on the flagpole, and with copper plates dipped in the water. Messages were distinctly heard between boats passing at quick intercommunication for preventing collisions.

Not only natural productions but sometimes manufactures are largely dependent upon peculiarities of climate, and are consequently almost confined to particular parts of the earth. An example in point is furnished by the manufacture of anhydrous paper, which forms the best dielectric for underground telephone cables. This pato obtain the best results the paper must be manufactured in a drier at-Isles. Accordingly this industry has forged ahead in America, and has fallen into disuse in England, although the use of anhydrous paper there is very extensive.

HOW BANK NOTES ARE MADE,

Details of the Intricate Process-Guard to Prevent Counterfeiting. First in consideration in making a bank note is to prevent others from making a counterfeit of it, says the New York Herald. Therefore, all the notes of a certain denomination or value must be exact duplicates of one another. If they were engraved by hand this would not be the case. Hand engraving is more easily counterfeited than the work done by the process actually used. "Every note," said an ofsalient points of it, and recite many ficial of one of the leading bank note companies, "is printed from a steel plate, in the preparation of which many persons take part. If you will look at a \$5 greenback you will see a picture in the center, a small portrait, called a vignette, on the left, and in each of the upper corners a network of fine lines with a dark ground, one containing the letter and the other the figure 5. To make a vignette it is first necessary to make a large drawing on paper with great care, and a daguerrotype is then given to the engraver, who bables who cannot take any other food uses a steel point to make on it the ontrelish the perfect food Grape-Nuts and lines of the picture. The plate is inked and a print is taken of it.

"While the ink is still damp the print is laid down on a steel plate, which has been softened by heating it then put in a press and an exact copy and prepared it as follows: I soaked of the outlines is thus made on the with his graver, a little tool with a three-cornered point, which cuts a clean line, leaving no rough edge. Now, this plate is used to print from. It must be made very hard, and this is done by heating and cooling quickly. A little roller of softened steel is then rolled over it by a powerful machine until its surface has been forced into all the lines cut into the plate. The outlines of the vignette are thus transon and is also a delicious, healthful food figred to the roller in raised lines, and for grown-ups, as we have discovered in after the roller is hardened it is used Name given by Postum to roll over plates of softened steel, and thus makes in them sunken lines Grape-Nuts is equally valuable to the exactly like those in the plate originally engraved. The center picture is engraved and transferred to a roller, like the vignette, but the network in the the famous little book, "The Road to upper corners and also on the back of the note is made by a lathe. This machine costs \$5,000-a price that puts

Its work is so perfect that it canno be imitated by hand. The lathe en graves the network on softened steel Dr. Carl Peters to Lead Another Ex and the figure in the middle is then engraved by hand. It is now hardened and transferred to a roller like the oth the Cecil Rhodes of Germany because

"The plates from which notes are to be printed are of softened steel and of silken threads, and now an insect large enough to print four notes at once. Four engravings of the note ported by two American naturalists. must, therefore, be made on it, and Small balloons, a quarter of an inch this is done by rolling the hardened steel rollers containing the raised pictures over it in their approprithat each carried a fly (genus Empis), ate places until the pictures are resembling the hornet-fly, with a dead pressed into its surface. The fine lettering around the borders of the note is transferred in the same way but the other lettering is put on by DR. CARL PETERS. collecting further band. This process saves a good deal information to prove the theory that of time and it secures absolute unt King Solomon's mines were located formity in the four engravings on the there, plate. The back parts of the note are The energetic doctor has already printed first, and when the ink is dry produced an interesting book of testi the green back is printed, to be fol mony gathered on the spot at first lowed by the red stamps and numbers | hand to indicate that the Ophir of the It is then signed and issued. For great Old Testament, which was the source er security one part of the note is en of the Queen of Sheba's enormous graved and printed at one place and revenues, was none other than this another part at another place, whet now darkened portion of Africa. H it is sent to Washington to be finished says, furthermore, that the Queen of and signed. But, needless to say, after Sheba and Solomon and all the gen all this care and all these safeguards erations of miners that went before many skilifully executed counterfeits them and came after them merely have been made and issued, some of took off the top layers of the gold that them so good as to deceive exper lies there yet, only awaiting up-tojudges of money."

IN THE DEPTHS OF THE EARTH

Scientist Suggests Establishment e

Subterranean Observatories. A proposal to install several hundred subterranean observatories at depthi gals, poisoned lances and ugly looking of anywhere from a few hundred yardi to a mile or so may appear sufficiently startling. It ceases to be so, however homes. In many instances lives that when we learn that the observer would be lost in homes are saved in themselves are to be on the earth's sur face; it is only their instruments that plex modern appliances for every sur- it is proposed to place so far under ground, and these may be lowered into borings such as are now made for ar tesian wells. The principal measure ments would be of temperature; but ! is claimed by M. A. Laisant, who ad vocates the plan, that its results would boat to another. Each boat carried in add greatly to our knowledge of the its pilot house a telephone connected earth's crust and its phenomena, both normal and abnormal. M. Laisant sett

"While astronomical instruments in volve considerable expense on account a distance of 500 feet. A. F. Collins, of their high precision, the apparatus the inventor, believes the range can in use for meteorological observations be extended to thousands of feet; but cost much less, and this would also no great range is aimed at because be true for those that would be em the special purpose is to furnish river ployed in subterranean observation. It and harbor craft with a means of would be sufficient to sink at a certain number of properly chosen points hole in the same manner as artesian wells or, still better, in the way that h used in America to bore for petroleum The depth would be more or less considerable, according to the region and the nature of the geological strata; is should be governed by data known to not be chimerical to think of reaching per was formerly made in England, a depth of several kilometers in some but experience has demonstrated that | places, while in others a few hundred meters might suffice.

"As to the locations of the borings mosphere than that of the British and their number, here, too, the geologists can furnish the necessary in dications. Deep borings while in course of making will give interesting geological information, since they will furnish continuously specimens of the strata traversed, which may be studied and analyzed. When the boring has once been finished it will be easy to in troduce into it measuring apparatus and especially thermometers. The study of the pressure at these great depths, that of the composition of the gases that are encountered, the electric and magnetic state of the medium and other elements will possess equally great interest. With the registering apparatus now at our disposal most of the indications mentioned will be easy to obtain when the installation has once been made without the necessity of displacing the instru

ments. "When a large part of the surface or the globe has thus been covered with subterranean observatories properly lo cated, the systematic centralization of the observations and daily exchanges of them will soon furnish an important contribution to terrestrial physics, and we shall see that there is a necessary correlation between the variations of temperature, pressure, etc., at the different spots and also between these variations and certain exterior phenom

Telegraph Shorthand.

A complete telegraphic system of shorthand has been laboriously worked out by A. C. Barona and named "Pantelegraphy, Section Pape." It consists redhot and letting it cool slowly. It is in a reduction of the Morse alphabet to time in the Philippine Islands know 10 short characters or sounds, which are so manipulated by a key as to exsteel plate. This the engraver finishes press anything and everything by them in such a way as to give the public greater privileges while at the same country once more." It is not likely the telegraph operator. A set of au land, for men returning from the bi tomatic instruments is now being made | Territory of the Arctic circle upo which will, it is said, make messaget landing at Tacoma declare they ar so cheap that they will be largely used again in "God's country." But sine instead of letters.

GERMANY'S CECIL RHODES.

pedition Into East Africa. Dr. Carl Peters, who has been called

of the vast slice of African territory he bought unde the German flag is now preparing to set out upor still another jour to East Africa, to continue the ex

ney of adventure plorations begu on previous expe ditions, especially with the idea of

date American mining machinery to bring it forth.

Dr. Peters has had as many hair breadth escapes while exploring in Africa as any man now living. He has in his possession nearly thirty assespears which were captured by him self at various times in personal com bats with the natives. He is also pretty well covered with scars as the result of these encounters. Dr. Pe ters used to be a personal chum of Kaiser Wilhelm, and at the time he was a member of the Reichstag was supposed to be a sort of spokesmar for the Emperor. But the charges of cruelty brought against the explores when he was governor of German East Africa caused a falling out be tween the two.

WOMEN'S SHOE STANDARD. forth his plan in La Raison, as follows Athletics Has Brought About an Eu tire Change in Hosiery.

The athletic girl of to-day is a sur prise to people who have not been not ing her development. She has grown beyond all recognized standards t classical dimensions.

The bootmaker still calls a 4 B show his model, exhibits it in his window and it is a pretty little thing to see But the athletic girl, who has been brought up in a family where she has had an opportunity to live a healthful natural life, with plenty of out-doo

exercise, laughs at such tiny things. The athletic girl has brought abou an entire change in the hosiery depart science, but should in general be as ments of the shops, continues the Kan great as possible. It would probably sas City Star. There was never a time when there were prettier or more ex travagant things for women in the cob web varieties of fine lists thread and silk. Women wear these expensive things for outdoor sports as well as for dress occasions, but the sizes hav developed with the women who wea them. Where 8, 81/2 and 9 were worr five years ago, the girl of to-day wear 91/2, 10, 101/2 and she would wear 1

if she could get it. In the shoe shop there is the sam noticeable change. The boots are made to go over the 10 and 1032 stockings.

In the "misses' department" of th fashionable shoe store spring hee shoes range from children's size up t boots so big that they might belong t young giantesses. They are for ath letic girls who are kept children a long as possible and wear the spring heel boots until they are ready to mak their bow to society.

Gloves have changed with other as cessories of the feminine wardrobe and the well built girl wears 61/2, and 71/2, in place of the 51/2, 51/4 and 6 that have been worn. For one thing her hands are not only large, for sh no longer stops the circulation by squeezing her hands into a glove a siz too small for her. She cannot tool coach or handle an automobile wit hands in a vise, so she wears some thing that is an easy fit.

God's Country.

Do you know where Ged's country located? When we were out in th Territories enduring hardships and pr vations, we used to talk of 'back in the States" as "God's country." The early pioneers of the West looked to ward the Atlantic scaboard and th country along the Ohlo and think o "God's country." Now the poor devil who are compelled to remain for that any part of the United States "God's country." Nearly all of ther upon returning to American shores re mark: "It is good to be back in God" time immensely reducing the work of that Alaska is included in the good our colonial acquisitions, the sobrique "God's country" is fast becoming rec ognized as meaning the United States

Millionaires of New York. There are in New York City to-da; 1,320 millionaires, as against 294 twen ty years ago and twenty-five in 1853 There were no millionaires in the city 100 years ago. The first person t reach that distinction was John Jacob Astor, who became a millionaire abou the year 1820.

Kind words are never lost-unless a woman puts them in a letter and give it to her husband to mail,
